Advanced Human-Computer Interaction
Topic 4: Presentation Skills

Tracy Maniapoto

Assignment - literature review:

- Topic will be the same topic area as the topic selected for your group project
- Your literature review will focus on 2 (two) articles
- Both articles must be from HCI publications
- Ideally each group member must choose <u>different</u> articles to cover the adequate breadth of your topic
- Articles should be recent if possible and from 2010 onwards
- Articles must be peer-refereed

Slides

Literature Review Slides Draft 1

The presentation should include the following:

1.Briefly, explain the context of your group project topic.

2.Describe the 2 articles and comment on how they relate to one another.

3.Briefly summarise insights from the literature and implications for your project.

Your slides should be appropriate for a presentation that lasts 5 minutes. The lecturers will provide the context and motivation for the project topics, so you can assume that the audience will know this when they listen to your presentation. You don't have a lot of time to cover each article in depth. Instead you will need to pick out **the most important and relevant information from each article**. As you work on understanding and summarising the articles, please take structured notes for your lit review report.

Aim to **communicate contents visually!**   We recommend you **include at least 2 images per article**. Choose or create images carefully in order to SHOW the design/innovation and the main result. You **MUST** include the full references within the slides. Please choose a style such as APA and be consistent. The slides must be in PDF format.

Notes

Literature Review Notes

The goal of this Literature Review Notes is to capture the important notes and thoughts on your articles, to describe the context and subdomains of your project research area, and how this literature review informs your project.

This is the background work that you will do to prepare for your Literature Review Presentation Draft 1. Writing out notes and insight is useful preparation for your Literature Review Presentation Draft 1. We accept bullet points however each should be clear and express a complete idea.

- **Introduction**
  - Summarise how your literature is related to your project topic
- **Methodology**
  - Describe how you located the papers you have.
- **Article Summaries**
  - summarise important points of the articles showing integrated understanding. It should discuss the following points as appropriate: area and subareas, approaches, findings.
- **Conclusion.**
  - What is important in these articles and how will this influence your project.
- **References**
  - Correct references are a critical part of academic writing. Provide a full reference in APA style for each of your publications.

Peer Workshop

## Literature Review – Peer Workshop (in lecture)

During the Week 7 lecture, we will divide up the class into groups of 3 and we will give our Draft 1 presentations to our peers.

The lecturers will hand out a Peer Feedback Worksheet in lecture.

On these sheets, peers will be asked questions about the articles presented to them. The presenter needs to give comprehensive explanations of the articles so that peers fully understand the research and can answer questions about them. Peers will also give feedback on the presentation style to help the presenter improve their presentation for Draft 2.

To receive full points for completeness,
- students must be present in lecture to give their live presentation to two peers and to listen to live presentations from two peers.
- worksheets for at least two peer presentations must be completed by hand and submitted to the tutor in lecture.

Video

Literature Review – Video

In week 7 you presented your Draft 1 presentation live to peers, and got feedback for improvement.

For Draft 2, you are asked to edit your presentation for improved context, content, text, visuals and insights.

You will record a 4-minute video presentation, with the same 3 components:

1.The context of your group project topic.

2.The 2 articles and commentary on how they relate to one another.

3.A summary of insights from the literature and implications for your project.

Remember, focus on most important and relevant information. Include visuals. Include full references for articles. Please submit two files: 1) the video file and 2) the slide file.
